Exploration Tour on Heyuan Environmental Protection 15-16 April 2019

Objectives

To explore the natural environment and environmental protection strategies of Heyuan

To explore the effectiveness of environmental protection in Heyuan

During the Easter holiday, forty F.3 to F.5 students visited several important hydraulic infrastructures in Heyuan, which enabled them to learn more about sustainable development in Mainland China.

BHJS News Bulletin

Exploration Tour on Heyuan Environmental Protection 15-16 April 2019

Through visiting the Xinfengjiang Hydropower Station, our students gained a deeper understanding of the characteristics and importance of developing hydropower in the region. Besides this, they also visited the Heyuan City Sewage Treatment Plant, where they could learn more about the process of removing contaminants from wastewater. The next day, our students went on a guided tour around the Nongfu Spring Bottled Water Plant, where they learned how economic development and environmental protection could be balanced.
